

**Queen's Family Health Team (QFHT) is tackling climate change with a goal to reduce aerosol puffer prescriptions by 50 per cent.**

**Did you know?**

Some puffers contain powerful greenhouse gases that are contributing to our warming planet!

Here at QFHT, we are trying to reduce our environmental footprint. You may be asked about your puffer use and whether a more environmentally friendly option is right for you.

You can also help by making sure you are using your puffer correctly and checking with your pharmacy to see if they have a recycling program.

Talk to your doctor, resident doctor, or nurse about your options.
